

Yeti

153, price group 2

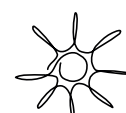

Yeti's slightly fuzzy texture looks and feels tender to the touch and is ideal for living room furniture. Yeti is delicate in appearance but wear resistant with a simple pattern; it is somewhere between corduroy and velvet - soft but with the durability of jeans. This special combination of strong and soft is an excellent choice for furniture upholstery.

100% Polyester

Martindale: 84.000

Lightfastness: 6+

PRODUCT CHARACTERISTICS

Quality	TRITON
Weight	625,40 gr/rm
Width	140 cm
Deafault roll lenght	50,00 RM
Composition	100% Polyester

MAINTENANCE INSTRUCTIONS

- This fabric is washable at 30°C up to 3 washes over the life of the fabric and only by professional laundry.
- Protect the fabric from direct sunlight. We recommend vacuum on regular basis using low suction and rotation on reversible cushions. Treat spills and stains as soon as possible. Gently scrape any soil or mop any liquid from the surface of the fabric and do not scrub. Apply appropriate cleaning agents strictly according to instructions to remove the residue of the spill.

APPLICATION

Results obtained from the tests satisfy British Standard BS2543:1995 for upholstery fabrics with a General Domestic End Use.

COLOR INFO

Whilst every effort is made to ensure that colours correspond closely to those illustrated in our sample-book, we can not guarantee to match samples exactly.

AVAILABLE FINISHINGS

standard finish, back-lick, back-lick + treated with a soil repellent product, treatedwith a soil repellent product, fire retardant to BS5852, fire retardant to BS 5852 + treated with a soil repellent product.

REMARKS

- This is a pile fabric and will flatten as a characteristic. Regular light vacuuming or brushing, with a soft brush is necessary for optimal appearance retention.
- This fabric, due to its type of construction, can be snagged easily. Care must be taken to avoid sharp edged toys, buckles, jewellery, domestic pets or vacuum cleaner fittings damaging the threads of the fabric in this way. If snags do occur, carefully push them back into the fabric with a fine but blunt tool. Under no circumstances attempt to pull them. Flatweave covers do have a tendency to „pill“ in the early months of use but this will decrease with time.
- Soil Resistant Finishes: Where your furniture has been treated with a protective finish by a third party, we as manufactures cannot accept any liability for problems caused by such treatment or arising from it, of any kind. Nor can we accept liability for the re-treatment of any replacement parts which may be supplied at any time.
